## **PRESS RELEASE**

### **Industrial-Grade Wireless Intercom Improves Security & Efficiency**

**Carmel, Indiana** – Designed to provide wireless communication from a Loading Dock or Receiving Door, the DoorCom™ wireless intercom will dramatically improve efficiency and security at virtually any facility.

The system installs easily at any entry point to permit visitors to announce their arrival. The long-range performance allows radio-equipped personnel to receive a call from practically anywhere in the building and instantly answer back using a portable 2-way radio or desk-top base station.

DoorCom™ helps to increase efficiency and maintain security by allowing exterior doors to remain locked. Workers can stay focused and productive until they receive an intercom call. Wasted time is reduced and deliveries and pick-ups are handled more quickly. Approximate range of the system is 350,000 square feet (actual range depends on building structure and topography).

The system is compatible with any other business band 2-way radio operating on the same frequency. The system is available in the popular VHF and UHF licensed-business frequency bands and a VHF MURS License-Free model is also available.

Ritron offers a variety of compatible portable 2-way radios and desk-top base station radios.

Ideal for a wide variety of applications such as Manufacturing, Warehouses, Schools, Hospitals.

The DoorCom™ wireless intercom is designed and manufactured in the USA by Ritron, Inc.
